

Development of human skin equivalents to unravel the impaired skin barrier in atopic dermatitis skin

Mogbekeloluwa Oluwadamilaju Danso-Eweje

A microscopic image of skin tissue, showing the epidermis and dermis. The epidermis is the upper layer, composed of multiple layers of cells, with the most superficial layer being the stratum corneum. The dermis is the lower layer, containing various types of cells, including fibroblasts and immune cells, and a network of collagen fibers. The image is in grayscale, highlighting the cellular structure and texture of the skin.
